

TITLE:

EXPENSE TRACKER

OBJECTIVE:

Create a Python program that records expenses and calculates the total spent.

CODE:

```
total = 0
```

```
while True:
```

```
    expense = input("Enter expense amount (or type 'done' to finish): ")
```

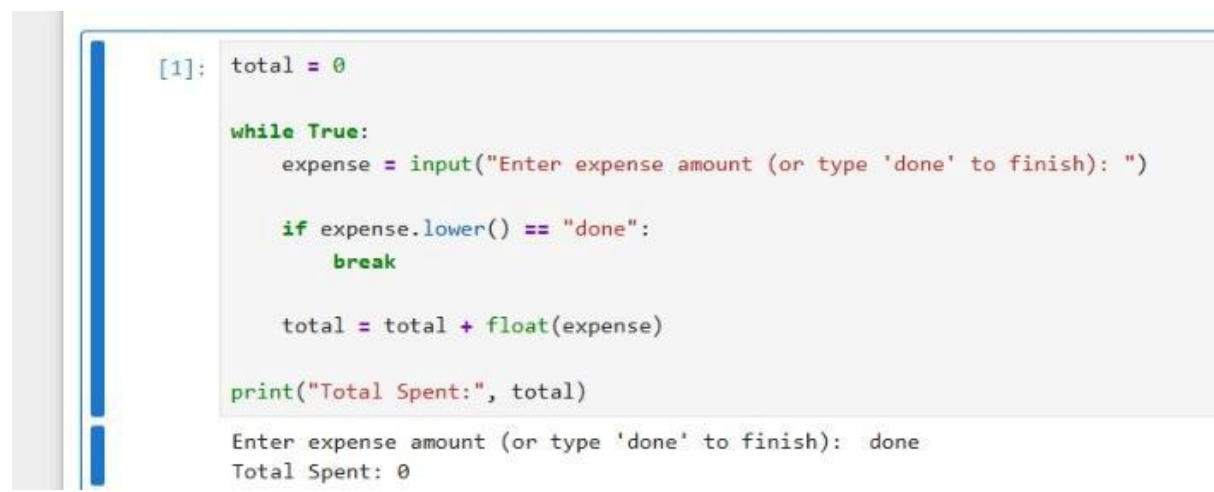

```
    if expense.lower() == "done":
```

```
        break
```

```
    total = total + float(expense)
```

```
print("Total Spent:", total)
```

OUTPUT:

```
[1]: total = 0

while True:
    expense = input("Enter expense amount (or type 'done' to finish): ")

    if expense.lower() == "done":
        break

    total = total + float(expense)

print("Total Spent:", total)

Enter expense amount (or type 'done' to finish): done
Total Spent: 0
```

CONCLUSION:

The program successfully accepts multiple expenses and calculates the total amount spent using Python.
